Skills

- **Languages:** JavaScript, TypeScript, Java, HTML5, CSS
- **Frameworks:** React.js, Vue.js, Redux, Vuex, Node.js, Next.js, Express, Webpack, Vite, WebSockets, Tailwind, Jest, Cypress
- **Databases & Cloud:** MySQL, MongoDB, Redis, Jenkins, AWS S3, GH Actions
- **Tools:** Git/Github, Postman, JIRA, Figma, Google Analytics, Cursor, CoPilot

Work Experience

SOFTWARE ENGINEER

[Encora](#)

Noida, India

AUG 2025 - PRESENT

- Developed core **directory platform features** including **User Groups**, **Device Groups** and **Dynamic Rule Builders** to enhance group management capabilities for IT Admins using **React.js** & **Redux** while following **feature flag-driven development** (via **LaunchDarkly** & **Split**) to support **progressive rollouts** and controlled releases.
- Led the transition from a **monolithic architecture** to **micro frontends**, enabling scalable development and deployment autonomy across teams, and set up a new **CI/CD pipeline** using **GitHub Actions** to streamline workflows.
- Contributed to improving product quality by actively working on **Customer Found Issues (CFIs)** and reducing TAT for critical fixes. Leveraged AI tools like **Cursor** and **GitHub Copilot** for writing effective **unit & acceptance tests** with **Jest** and **Cypress**.

Projects

[Quill- Write. Schedule. Publish](#)

- Developed a **blogging platform** with **JavaScript**, **React.js** and **Redux**, enabling users to create, edit, draft and manage blog posts through an interactive UI.
- Implemented **RESTful APIs** for client-server communication, leveraging **Node.js** and **Express.js** for the server architecture and **MongoDB** for data storage. Integrated **OTP-based email-authentication** using **JWT token** for secure user registration.
- Developed **blog scheduling functionality** using **Node-Cron** to enable automated publishing of posts at specified times, and integrated **Nodemailer** to send **welcome emails** upon user registration, enhancing overall user onboarding and engagement.

[PennyCTRL](#)

- Engineered a **scalable AI-driven personal finance platform** using **React**, **Node.js**, and **MongoDB**, supporting automated expense tracking and financial insights.
- Built a **multi-model OCR pipeline** combining **Tesseract.js** and **Gemini Vision**, improving receipt extraction accuracy for low-quality and complex documents.

[Let's Chat](#)

- Created a software application for **real-time chatting** utilizing **React.js**, **Express.js**, and **Node.js**. Integrated **Bootstrap** to enhance user interaction and ensure responsiveness.
- Employed **Web Sockets (Socket.io)** to facilitate real-time bi-directional data flow for seamless communication between users.

Achievements

- Secured recognition as **ACM ICPC Regionalist**, **Top 500 in Google Kickstart**, and achieved **5 stars in Data Structures Algorithms on HackerRank**, reflecting strong problem-solving and coding skills.
- Secured **4 Hackathon Wins (IIT Kanpur, IIIT Hyderabad)** by delivering innovative and high-impact solutions in competitive environments

Education

- **B.Tech in CSE (8.56 CGPA)** [Indraprastha University](#)
- **CBSE (87%)** [Modern Vidya Niketan, Aravalli Hills](#)
